

MANIKANDAN CHINNADURAI

DevOps Engineer

Bangalore, India • +91 7010639750 • manojmani408408@gmail.com

PROFESSIONAL SUMMARY

DevOps Automation Engineer with 7 years of IT experience and 4+ years driving infrastructure automation through Ansible and integrated with Jenkins CI/CD pipelines. Converted legacy manual deployment scripts into idempotent, reusable Ansible playbooks, cutting provisioning time by 40% across dev, staging, and production. Built and maintained Jenkins pipelines that trigger Ansible playbooks for automated, repeatable, zero-touch deployments across 10+ microservices and Kubernetes/Docker environments. Strong scripting ability in Python and Bash, with Git-based version control (GitHub) for playbook and pipeline source management. Proven track record resolving 95%+ of P1/P2 incidents within SLA and managing infrastructure across Linux environments (RHEL, CentOS, Ubuntu) in telecom-grade production systems.

TECHNICAL SKILLS

CI/CD	Jenkins, Git, GitHub
Containerization	Docker
Orchestration	Kubernetes (HPA, RBAC, Secrets, Liveness/Readiness Probes)
Config Mgmt & IaC	Ansible (roles, playbooks, inventories, handlers, conditionals), Terraform
Observability	Prometheus, Grafana, AlertManager, Kibana – Metrics, Logs & Traces
Site Reliability	SLI / SLO / SLA Management, Error Budgets, Incident Response & RCA, High-Availability Systems
Scripting & OS	Python, Bash, Linux (RHEL, CentOS, OL, Ubuntu), Windows
ITSM	Jira, BMC Remedy, ServiceNow

PROFESSIONAL EXPERIENCE

Netcracker Technology Solutions

Feb 2022 – Present

Senior DevOps Engineer — Site Reliability & Infrastructure

- Build and Maintained **Jenkins CI/CD pipelines** across **10+ microservices** for build, test, and deployment - reducing deployment errors and shortening release cycles.
- Executed **Blue-Green** and **Canary** deployment strategies with traffic-shift rollback capability, enabling zero-downtime releases.
- Authored reusable **Ansible** roles and playbooks with dynamic inventories, conditionals, and handlers to automate server provisioning and application deployments, cutting provisioning time by **40%** across dev, staging, and production.
- Converted legacy manual/shell-based deployment scripts into idempotent **Ansible** playbooks, standardizing repeatable deployments and eliminating manual configuration drift across environments.
- Integrated **Jenkins** pipelines with **Ansible**, triggering playbook runs directly from build stages for fully automated, zero-touch deployments.
- Wrote **Bash** and **Python** utility scripts for environment checks, log parsing, and pre/post deployment validation within Ansible and Jenkins workflows.
- Managed **Kubernetes** workloads including **HPA** auto-scaling, Secrets, ConfigMaps, and liveness/readiness probes to sustain availability under variable load.
- Defined and tracked **SLIs, SLOs, and SLAs** for production services, using error budgets to balance release velocity with system reliability.
- Built **Prometheus/Grafana** observability stack with **AlertManager** routing alerts to Icinga detecting degradation before user impact.
- Handled P1/P2 incidents end-to-end including troubleshooting, resolution, and RCA documentation while maintaining 99%+ SLA compliance.
- Collaborated with development teams to identify pipeline bottlenecks, reduce build times, and implement automated quality checks.

Vodafone Idea (via Impact Technologies)

Jan 2021 – Jan 2022

Systems Engineer

- Delivered end-to-end Linux system administration and production support, resolving **95%+** of critical incidents within SLA across workloads.
- Monitored system health and performance against defined **SLOs**, performing proactive capacity checks and package lifecycle management (YUM/RPM/APT) to maintain high-availability for production workloads.
- Managed and resolved incident, problem, and change tickets in ServiceNow, Jira, and BMC Remedy following ITIL workflows.
- Supported **Docker** container deployments and troubleshoot containerized environments - crash loops, OOM errors, and image pull failures — for internal application teams.

Dell (via Unique System Payroll)

Jun 2019 – Dec 2020

Systems Engineer

- Managed **Active Directory** users, groups, and RBAC policies; performed **SCCM**-based patch management maintaining high compliance across enterprise fleet.
- Configured and maintained **DNS** and **DHCP** services; delivered L1/L2 hardware and software troubleshooting for desktops, laptops, and network infrastructure.

EDUCATION

B.Sc — Electronics & Communication | K.S.R. College of Arts and Science

2015 – 2018
